

Working with Stages in Mautic

What are stages?

Stages are a way to organize your contacts based on where they are in your marketing funnel. For example, you might have a "prospects" stage for contacts who have shown interest in your product or service, but haven't yet made a purchase. You might have a "customers" stage for contacts who have made a purchase, and a "loyal customers" stage for contacts who have made multiple purchases or engaged with your brand in other ways.

Why use stages in marketing?

Using stages in marketing can help you:

- Organize your contacts and campaigns
- Automate your marketing efforts
- Personalize your messaging to each stage of the funnel
- Improve customer engagement and retention
- Increase conversions and revenue

How to set up stages in Mautic

To set up stages in Mautic, follow these steps:

1. Log into Mautic and on the left menu, click on "Stages".

2. Click "New" to create a new stage.

4. Give your stage a name and description.
5. Choose the color you want to use to represent the stage.
6. Set the weight for this stage. Remember that Contacts cannot move to a stage that has a lower weight - they can only move in one direction.
7. Save your stage.

Repeat these steps for each stage you want to create.

How to transition users through the stages using campaigns

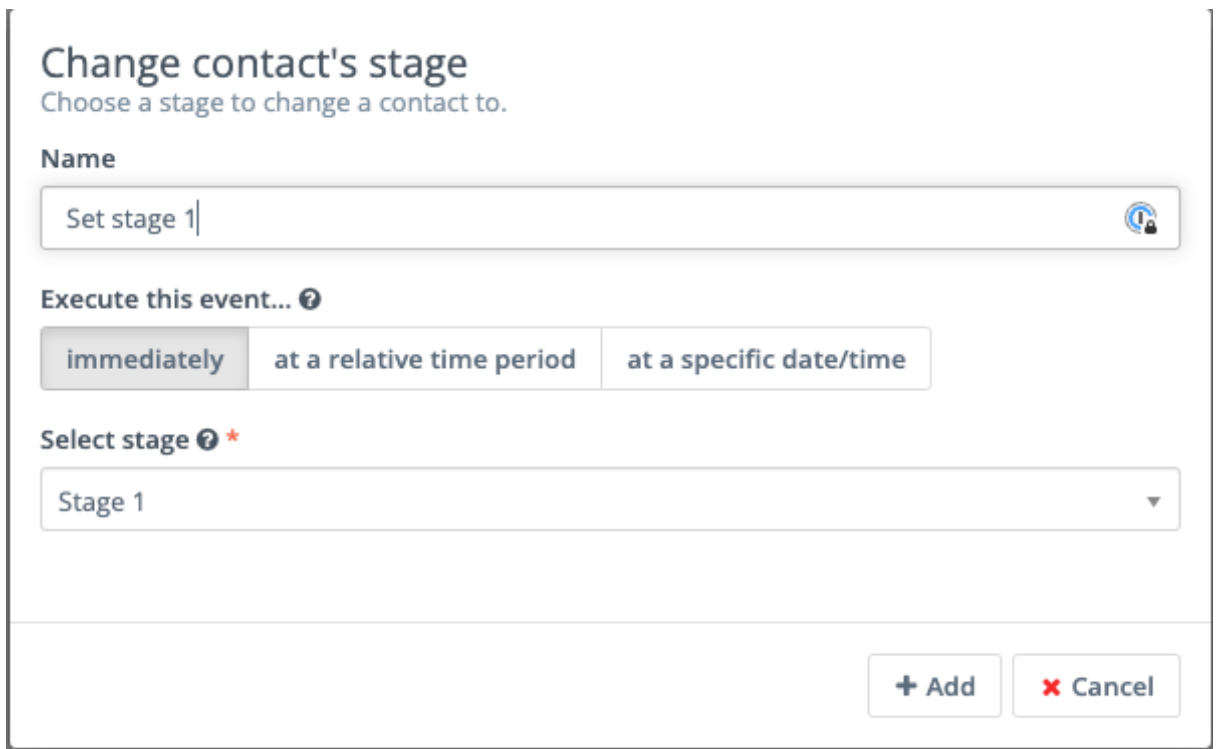

Once you've set up your stages in Mautic, you can use them to automate your marketing campaigns. To transition users through the stages using campaigns, follow these steps:

1. Create a new campaign in Mautic.

2. Choose the trigger that will start the campaign. For example, you might choose to trigger the campaign when a contact joins a specific segment or completes a form.
3. Create your campaign actions. These might include updating the Contact's stage based on certain conditions

The screenshot shows a grey 'Actions' panel with a blue upward arrow icon. Below the panel is a search bar with the text 'sta' and a magnifying glass icon. A dropdown menu is open, showing a single blue button with the text 'Change contact's stage'.

The screenshot shows a configuration form titled 'Change contact's stage' with the subtitle 'Choose a stage to change a contact to.' The form includes a 'Name' field with the text 'Set stage 1' and a lock icon. Below this is the 'Execute this event...' section with three tabs: 'immediately' (selected), 'at a relative time period', and 'at a specific date/time'. The 'Select stage' section has a dropdown menu with 'Stage 1' selected. At the bottom right, there are two buttons: '+ Add' and 'x Cancel'.

Contact stages
Condition that the contact belongs to at least one of the selected stages.

How to align stages in Mautic with your business workflows

To align stages in Mautic with your business workflows, consider the following:

- How do you define a lead?
- What are the steps a lead takes before becoming a customer?
- How do you define a customer?
- What are the steps a customer takes before becoming a loyal customer?
- What are the steps a loyal customer takes to become an advocate?

By mapping out your customer journey and aligning your stages with your

business workflows, you can create a more effective marketing strategy using stages in Mautic.

Note: Remember that Contacts cannot move to a stage that has a lower weight - they can only move in one direction.
